## INFRARED HEATER

### CERAMIC

The start of the ceramic heaters is fast in order to reach the required temperature of 60 degrees in the infrasauna. Thus fewer heaters are sufficient. These heaters work with the surface temperature of 250–300 °C and are covered by the protective grill.

### RED-LIGHT

Due to the new technology, the heaters by far reach the required temperature of 60 degrees inside the infrasauna out of all the infraheaters available in the market. They generate the surface temperature of 300–500 °C and are equipped by the protective grill.

### CARBON

The Carbon heaters generate the surface temperature of 70–170 °C. On one level, they are slower in reaching the maximal temperature of 60 °C inside the infrasauna, on another level, they bear longer life span. The distribution of infra red rays of the carbon heaters is more symetrical and the most effective.

IONIZER

This infrasauna enriches air which is being inhaled by the negative ions. This then resembles the quality of the air in the mountains or by the sea. It also effectively liquidates bacterias. The ozone generator is included in the ioniser.

CHROMOTHERAPY (color therapy)

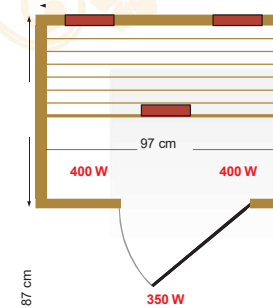

The infrasauna enables switching various kinds of light / shades as per the wish / mood by the remote control. Each colour influences our mental health, it is refreshing, stimulates or on the contrary calms.

**ELECTRIC SAUNA HEATERS** Choose a suitable electric sauna heaters from our offer of 5 modern and economical models to your sauna. You can find the heaters on page 17.

**INFRARED SAUNA**

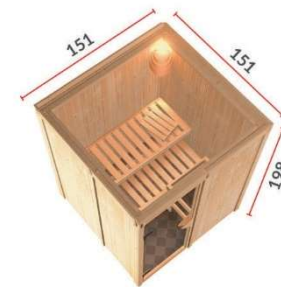

- ☞ Heat 40 - 60 °C (104 - 140 degrees F)  
Infrared energy deeply penetrates the skin and warms the muscles and joints - IR emitters produce wavelengths for deep penetration.  
Bathers can use sauna immediately after it's turned on - some prefer to wait a few minutes until sauna is around 40 °C.
- ☞ Heat 85 - 100 °C (185 - 212 degrees F)  
Steam helps moisten nasal passages and allows use of aromatherapy by mixing essential oil with the water.  
Bathers should allow 30-40 minutes for sauna to warm up.

## ELECTRIC SAUNA HEATERS

**3,6kW built-in control unit**

Basic model (for Heikki and Variado)  
Heat to 80 ° C in about 60 minutes.  
Connection - 230 V  
Sauna stones included

**9kW, built-in control unit**

Control panel integrated into the base of the heater  
The heater can be connected only to a 3-phase connection (400V 3N ~)  
Sauna stones included

**9kW, external control unit**

Digital panel on the outside wall of the sauna for maximum comfort  
Time preferences to turn off the heating  
Child safety lock  
Integrated driver for indoor lighting  
The heater can be connected only to a 3-phase connection (400V 3N ~)  
Sauna stones included

**Blackfin 9kW, external control unit**

Height adjustable tray of sauna stones  
Control of temperature, light intensity, start timer  
From the renowned European brand Sentiotec  
The heater can be connected only to a 3-phase connection (400V 3N ~)

**Combi 9kW, external control unit**

Built-in steam generator  
Control of temperature, light intensity, start timer  
Durable, elegant display with control  
From the renowned European brand Sentiotec  
The heater can be connected only to a 3-phase connection (400V 3N ~)
